GCORDERFORM

USER'S MANUAL

Prestashop Module
Order Form

SUMMARY

LICENSE

Thank you for trusting us and for choosing the "Order Form" module.

The Prestashop module "Order Form" is under the same license as all modules available on http://addons.prestashop.com. As a result, this module can only be used once for a single shop (except in "multistore" context).

If you want to use this module on several stores, please purchase as many licenses as you need.

INSTALLATION

REQUIREMENT

This module has been tested and works perfectly on Prestashop from version 1.5.x to version 1.7.2.3 (latest version available at the time of writing this document). It should works smoothly on all future 1.7.x versions.
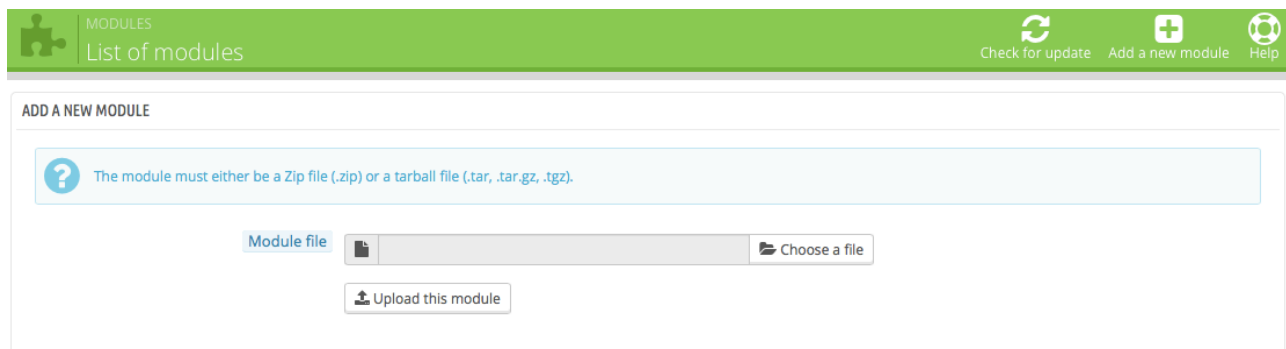

PROCEDURE

Let say our shop is online at : http://www.maboutique.fr/ and that the administration is accessible at : http://www.maboutique.fr/admin/

Prestashop offers different methods to send a module :

- From the "Modules" page of your store's administration

- From your store's directory

SEND VIA THE ADMINISTRATION

From the "Modules" tab, click on the "Add a new module" button. The following area appears :

Then click on "Choose a file" and select the archive of our module. This is the file obtained when you purchased our module. Finish by clicking the "Upload this module" button. The module is then sent to your store and appears on the list of modules available.

Another way to send our module is to unzip the archive (obtained when you purchased our module) directly in the "modules" folder of your store.

The created content will be : http://www.maboutique.fr/modules/gcorderform/

The module then appears in the list of available modules.

	Order Form	Add an order form which makes your customers order quicker and easier.	CONFIGURE ▾ ☐
	v4.0.0 - by Grégory Chartier		

INSTALLATION

"Order Form" now appears in the list of available modules but it's not installed on your store. In order to proceed with the installation, simply click on the "Install" button.

ADDITION OF A LANGUAGE

The module is offered in a certain number of languages. If you wish to use our module in a language that is not included in the database, you can translate the labels via the interface made for this in the back office. Go to the "Translations" tab on the "Localization" tab. (For more information, see the official Prestashop documentation: http://www.prestashop.com/en/download/).

SETTINGS

On the "Modules" page of your back-office, clicking on the "Configure" button on the line of our module will bring up the following settings page.

DISPLAY ZONE

- "Order form URL" : This URL allows you to access order form. If you wish to create a link to the order form in your menu or in a text, this URL should be used. As a reminder, you can also access the order form from its icon in left/right column.

- "Display Left / Right Column" : Define which column of your theme should be displayed on the order form page.

- "Format" : Choose which order form format you wish to offer your customers. I recommend trying both.

- "Quantity Buttons" : Enable this option to display "+" and "-" buttons next to the quantity field

- "Empty order form" : After adding the products to the shopping cart, the order form will be emptied if you enable this option.

- "Image / Stock Column" : Choose the columns you wish to display in the order form

- "Link to product card" : Transform the product name into a link to the product sheet. Your customer can thus get more information about your product.

- "Product in stock" : This option allows you to display only declination in stock.

- "Thumbnail / Magnification Format" : This option allows you to choose the image format to be used as thumbnail on the order form, as well as its magnified hover / clicked version.

- "Product Category Displayed on loading" : Select the product categories that the order form should display when loading. If your server does not load your entire catalogue, I recommend you do not load anything or load a category of featured products. This setting does not affect the choice of categories available in the selector (see "Categories" setting).

- "Title" : The block title of the left/right column which allows to access the order form.

- "Image for column icon" : Send an image that will serve as the icon for access to the order form in the left or right column. If your theme does not use the left or right columns, this option is unnecessary.

- "Customer groups" : Select the customer groups that can access the order form.

- "Categories" : Select the categories to be displayed in the selector/category selection at the top of the order form. For format 1, I recommend selecting all categories. For format 2, I recommend selecting only the parent categories since the sub categories will appear.

SUPPORT

We made this module with the utmost care but it is possible that a bug may pass through our tests. Do not hesitate to report any bugs that you may encounter, we will be happy to help you quickly and efficiently.

Also, we listen carefully to all your suggestions of features and integrate most of them in the next updates. Warning, we never integrate any specific needs.

DEMO SHOP

A demo store is at your disposal from the product sheet of our module on Addons. The front-office and back-office user accounts are specified on the home page.

This shop is regularly reset, so do not hesitate to do all your tests there.
